

Designer's Choice Necklace: PDF File Directions

1. Choose the metal color for your necklace – either GOLD, RHODIUM or GUNMETAL
2. Open the PDF file that is titled with your metal selection.
3. The file is organized in individual pages including the following:
 - a. One page of 9 stone shapes (shapes are repeated)
 1. organic nugget
 2. ellipse
 3. oval
 4. rounded square
 5. small teardrop
 6. pie
 7. marquise
 8. circle
 9. tiny teardrop
 - b. One page for each of the 3 types of chain
 1. thick textured link
 2. medium textured link
 3. fine rope
4. Use the paint-by-number type pages to design your necklace. Duplicate, cut, rotate and paste the stone shapes into an arrangement you desire, but DO NOT manipulate their size (each shape is in correct proportion). You may replicate whole chains or select pieces of the chains to create layers of swag for your necklace.
5. Using the given color palette representing 16 different gemstones (see following page), utilize markers or color pencils to color in the stone shapes to bring your custom necklace to life.
6. Once you have completed your necklace, use a scanner to capture your design as a digital file, and make sure it is in JPG, PDF or PNG format before uploading it to the site.
